

This topographic map depicts a mountainous region with a complex river network. The terrain is characterized by numerous contour lines, indicating varying elevations. A central river system, highlighted in blue, flows through the region, with several tributaries. The map is divided into various land use zones, color-coded as follows:

- Blue:** Water bodies, including the main river and its tributaries.
- Green:** Forested areas, primarily located in the central and lower-left portions of the map.
- Yellow:** Agricultural or developed land, scattered throughout the region.
- Orange:** Specific land use zones, possibly wetlands or protected areas, located in several small, isolated patches.
- Grey:** Urban or built-up areas, concentrated in the central part of the map.

The map also features a network of roads and trails, indicated by thin black lines. A dashed line with cross-ticks represents a boundary or a specific administrative division. The map is overlaid with a grid of small black crosses, likely representing a coordinate system or a sampling grid. The overall layout shows a dense network of waterways and a mix of land use types across a rugged topography.
